Dignity Health employees
and
Brad Dugan is a consultant for Hill-Rom, Inc.

OBJECTIVES
1. Participant will verbalize three patient complications that can arise from immobility.
2. Participant will demonstrate an awareness of at least two solutions for efficient application of SPHM technology to enhance safe, early mobilization.
3. Participant will have the opportunity to collaborate/participate in one application of SPHM technology to achieve patient functional mobility, fall prevention and caregiver safety.
4. Participant will recognize non-traditional uses of SPHM applications with critical and/or complex patients.
SESSION FLOW

• Focus on hands-on demonstration of two complex patient scenarios with available SPHM technology.
• Focus on a specific patient handling task within their corresponding mobility level.
• Each participant will have an opportunity to assist or provide input into the problem-solving solution(s) and applications.
• At the end, we will conclude with overview of the top three takeaways.

PASSIONATE TAKE-AWAYS (Laurel)

• RED (WORKER’S SAFETY):
  – How do the applications you observed impact caregiver safety?
  – Give us one application that you would take back to your facility that impacts worker safety?

• ORANGE (FUNCTION & MOBILITY):
  – How might the applications you observed impact patient function and mobility?

• YELLOW (FALLS):
  – What impact do these activities have on fall prevention?
Thank you for your attendance and participation
