To Our Readers

Spring marks the time for new beginnings. This year, that includes the continuation of our fight against the COVID-19 pandemic. Our VISN 8 healthcare facilities are working hard to administer COVID-19 vaccines as quickly as possible. Hundreds of thousands of Veterans have already received the vaccine but we still have more work to do. The goal is to offer the vaccine to all Veterans who receive care at VA. Learn more on pages four to five about the importance of this vaccine in beating the pandemic and how you can get your COVID-19 vaccine.

This issue also features activities which may help you relax, have fun, and take pride in the finished products. Check out tips for building your own birdhouse on page three and starting a vegetable garden on page six.

Get ready to work your brain with a wordsearch puzzle on page seven. There, you will also find a recipe for a salad that is a springtime favorite.

Be well and stay safe!

Miguel H. LaPuz, M.D., MBA
Network Director, VISN 8

VA’s COVID Coach App to Manage Stress and Support Self-Care

The COVID Coach app was created for everyone, including Veterans and Servicemembers. It was designed to support your self-care and overall mental health and well-being during the coronavirus (COVID-19) pandemic.

This app features tools to track your mental health, ways to manage stress, pandemic wellness topics, and connections to resources for additional support.

COVID Coach can be used as a stand-alone educational and self-care tool. It can also work as a supplement to professional mental health care. The app is available for Android and IOS mobile devices at no cost.

To learn more, please visit mobile.va.gov/app/covid-coach.
Here is a great rainy day project to do. You may also enjoy this activity with the help of a young birdwatcher in your life. It takes just a little creativity to turn a household storage container into a backyard birdhouse. Let’s get started:

Step 1: Gather supplies
- Clean plastic storage container with lid (about 6 inches tall, 5 inches wide, and 5 inches deep)
- 1/4 cup measuring cup
- Marker
- Box cutter
- Sandpaper
- Paint and small paint brushes
- Wooden dowel or stick (2 inches long)
- Hot glue
- Heavy twine or string (30 inches long)

Step 2: Make a hole
- Place the measuring cup on the outside center of the container, about one-third of the way from the bottom.
- Trace around the measuring cup with the marker. If you don’t have a measuring cup, use an object with a two-inch diameter.
- Cut out the marked hole with the box cutter.

Step 3: Paint and glue
- Lightly rub the outside surface with sandpaper. This will make the paint stick better.
- Paint the container. Be creative!
- When the paint is dry, scrape off the paint just below the hole. This is where the dowel or small stick will be glued.
- Use hot glue to glue the end of the dowel to the birdhouse. Press and hold for a minute so the glue can set up properly.

Step 4: Attach string
- Cut two small holes or slats in the container lid, about one inch from each end.
- Thread each end of the string through each hole from the top. Tie the string together under the lid to create a loop.

Step 5: Hang it up and watch the show!
- Hang your backyard birdhouse in a tree or from a sturdy garden pole at least five feet off the ground.
Getting Your COVID-19 Vaccine

Important information about the COVID-19 vaccine for Veterans

In VISN 8, which includes VA facilities in Florida, South Georgia, Puerto Rico, and the U.S. Virgin Islands, hundreds of thousands of Veterans have already received the vaccine. And many others have scheduled their appointments to get vaccinated. These men and women know that vaccination is a critical and necessary step in beating the pandemic.

The following are some frequently asked questions that will help you better understand the importance of the vaccine. The answers will also explain where and when you can get it, and actions you should continue to take after you are vaccinated.

Who can get the vaccine?
Veterans enrolled for VA health care benefits can receive a COVID-19 vaccine. Veterans who are not enrolled, or do not currently receive care at VA, can visit VA’s Eligibility webpage to learn more: www.va.gov/health-care/eligibility.

VA health care facilities across the country are working hard to administer COVID-19 vaccines to Veterans as quickly as possible.
When does VA anticipate having enough vaccine to vaccinate all Veterans?
VA’s goal is to offer the COVID-19 vaccine to all Veterans who receive care at VA. The Centers for Disease Control and Prevention (CDC) project that there should be enough COVID-19 vaccine supply for all Americans by June 2021.

Where can I get the vaccine?
VA is offering the vaccine at facilities nationwide. In VISN 8, all medical centers and many outpatient clinics are offering the vaccine. You can learn more about vaccination activities in VISN 8 by visiting the appropriate webpage below:

How safe is the vaccine?
The U.S. vaccine safety system ensures that all vaccines are as safe as possible. The Food and Drug Administration (FDA) reviewed data from large clinical trials of the authorized COVID-19 vaccines to make sure they are safe and effective. The VA, CDC, and FDA will continue to monitor the safety and efficacy of these vaccines over time. This process will help to determine how long the vaccines protect against COVID-19. It will also identify if there are any rare or long-term side effects we need to know about.

Can I stop wearing a mask in VA facilities after I receive the vaccine?
No. After you receive a COVID-19 vaccine, you will still need to wear a mask that covers your mouth and nose when you are in a VA facility. This practice goes along with other VA safety rules like practicing physical distancing. Learn more about CDC safety measures at www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick. These safety steps help protect you, your fellow Veterans, and VA staff.

Where can I get more information about the vaccine?
Veterans can get more information about the COVID-19 vaccine by visiting www.va.gov/health-care/covid-19-vaccine, visiting their local medical center’s vaccine webpage (listed on the left), or by speaking with a provider.

Grow Your Own Salad

Are you looking for a new hobby? Want to eat healthier? Growing some of your own vegetables can help you do both! But starting a garden can be a challenge if you are not sure where to start. That is especially true if you do not have room or if you want to keep things small and simple.

Consider container gardening. This type of gardening works well for decks or patios. Plus, when fresh and tasty vegetables are just a few steps away, you are more likely to eat more of them.

What to Grow
Start with something easy, like salad vegetables. The best times to plant depend on where you live in the Sunshine Healthcare Network. Some vegetables can be planted in the spring. These include tomatoes, swiss chard, peppers, some types of spinach, and summer squash. Other vegetables grow best in the cooler months, between September and February. These cool season crops include kale, collard and mustard greens, and escarole. Also, consider growing some fresh herbs, like parsley or basil. They add wonderful flavors to salads, soups, and many other foods.

Once you decide what you want to grow, here are more gardening tips:

Containers
Choose ones with drainage holes so excess water can escape. Fill with planting soil, not soil from your garden. Soil-less mixes are a good choice, or you can make your own. For example, combine peat moss, compost, and perlite. This will create a medium-packed mix that will absorb water but allow excess water to drain. Place containers where they will get at least six hours of direct sunlight every day.

Fertilizer
Some planting soil mixes already contain fertilizer, but others do not. Whether you prefer to use organic or inorganic versions, most vegetables grow best with a balanced fertilizer. Look on the bag of fertilizer for three numbers to identify how much nitrogen, phosphorus, and potassium it contains. The numbers should be close to “6-6-6.” There are some exceptions, such as leafy vegetables that need only nitrogen fertilizer to grow well.

Seeds vs. Transplants
There are pros and cons to each. Seeds are less expensive and offer more plant varieties to choose from. Transplants require less growing time and less uncertainty, especially during the early growing phases.

When to Water
Plants that grow in containers will need frequent watering. It helps to test the soil daily. Water thoroughly around the base of the plant when the top inch of soil is dry.

Enjoy the ‘Veggies’ of Your Labor
When you harvest your veggies, take pride in your work. For much more on gardening, including what grows best and when in your region, visit gardeningsolutions.ifas.ufl.edu.

Spinach Strawberry Salad

Ingredients
4 cups baby spinach, packed
2 cups strawberries, sliced
1 medium avocado, sliced
¼ medium red onion, thinly sliced

Poppy Seed Dressing
2 teaspoons poppy seeds
2 tablespoons vinegar
1 tablespoon olive oil
1/2 teaspoon mustard
1/4 teaspoon black pepper
1/8 teaspoon salt

Directions
1. For the dressing, add all ingredients to a small mason jar. Secure the lid tightly and shake well to combine.
2. LIGHTLY combine the salad ingredients in a large bowl.
3. Add the dressing to the salad and toss lightly.

Options: Add diced cucumbers or zucchini. To reduce the fat content, leave out the avocado.
